Revolving tailstock centre MKS- for heavy loads Type 652 LDPI - with pressure display, length compensation and tailstock support- tip angle 60° For heavy duty machining
Perfectly suitable for turning and grinding machines

The revolving tailstock center features a low radial run-out value and is equipped with amply dimensioned roller bearings for absorption of the radial and axial forces

Bearings at head and shaft resulting in a long guidance

The bearing seats of the housing are manufactured with high precision in shape and dimensions

The reliable rotary shaft seal protects the bearings from dirt and coolant.
